A NEW TRADITION

**Fund the
FUTURE**

INVEST IN THE *future* OF ANGUS.

The **Fund the Future** program allows Angus breeders to donate proceeds from a designated sale lot to **The Angus Fund**, supporting the Angus Foundation in carrying out its mission.

Fund the Future sale lots will be marked with this emblem, and will ensure the legacy of the Angus breed lives on through the work of the Foundation.

¹Current Sires/Dams - at least one calf registered in herd book within the past two years
²Main Sires - Sires that met the requirements of the most recent American Angus Association Sire Evaluation report.
³Supplemental Sires - Young sires meeting the requirements for the American Angus Association Sire Evaluation report.
⁴Non-Parents - Registered animals born in the last 3 years with no current progeny in the Angus National Cattle Evaluation.

Expected progeny difference (EPD) and \$Value averages, standard deviations (SD) and minimum/maximum.

¹Current Sires have at least one calf registered in the American Angus Association herdbook within the past two years.

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an “I”, and may or may not include the animal’s own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.
